

ANTON SMIRNOV

Summary

I'm a Front End Web Developer with an emphasis on React and experience in small web production projects and a startup doing sites for local clients. I am a motivated and energetic individual who likes to solve tricky problems and resolve code bugs. Passionate about producing great user experiences with a customer-first attitude. During my last assignment role, I helped the company stay organized and save up to 21% of productive time, which translated into an additional 77% of revenue for the company and up to 80% for the clients.

Projects

Burger Builder

Stack: HTML, CSS, JavaScript, React, Redux, Redux Saga, Firebase

Implemented class-based code for React.

Connected Redux for state management.

Used Redux Saga to perform side-effects for the application.

Replaced class-based code with React Hooks.

Used custom axios, and interceptors to chance state.

Used React.lazy to lazily import some components.

Created a custom React Hook to handle errors in Request.

Used React.memo and useCallback for performance optimization.

Google Firebase as a backend replacement and realtime database.

Was deployed both on Firebase and Netlify.

A user can log in, signup, add ingredients, see the total price, orders, and make orders.

Mobile-friendly application.

May 2020 to Current

JavaScript Games

Stack: HTML, CSS, JavaScript

Building popular legendary games on vanilla JavaScript.

Added new classes, updated innerHTML content based on the final result.

Applied setAttribute, getAttributeApplied, setInterval, clearInterval, addEventListener to add and manage content of the game.

Used e.keyCode to manage the direction of the snake.

Apr. 2020

Ticketing4Good

Stack: HTML, CSS, JavaScript, React.js, Material UI, Bootstrap, PostgreSQL, NodeMailer, Node.js

Used React Hooks for the front-end part.

Learnt Material UI in two weeks to design components.

Used Bootstrap to manage different alert types.

Used NodeMailer to send emails.

Used Stripe technology to process payments.

Used QRcode to create QR codes and insert those ones into tickets.

Applied Google Maps API to locate events on the map.

A user can watch and search for events, can see a description of those events.

A user can buy tickets for those events and add them to a cart, can update the cart.

A user can go to a checkout page and make a payment.

Once the payment is successful the user will get an email with all the information plus a ticket with a QR code for the event.
